

## Installing Oracle R Framework Distribution on Apple Mac

The Oracle R Distribution (ORD) Apple Mac Framework is required to support advanced analytics functionality and is not automatically installed.

The ORD is supported on the Apple Mac operating system versions listed here:

[https://community.oracle.com/community/business\\_intelligence/data-visualization](https://community.oracle.com/community/business_intelligence/data-visualization)

The Apple Mac installer provides the ability to install the ORD into the standard public framework location `/Library/Frameworks`

Follow these steps to install ORD on Mac:

- 1) Go to the Oracle Open Source Download Page for Oracle R Distribution

`https://oss.oracle.com/ORD/`

- 2) Select the R Distribution for macOS and save the file:

`ORD_3.2.0_macOS.pkg`

- 3) Double click the downloaded file to start the Apple installer.

- 4) Follow the on screen instructions to complete the installation.

Note: The installation requires you to enter an Admin username and password. You must carefully review license terms and agree. This is an open source package see [oss.oracle.com](https://oss.oracle.com) for more details.

## Troubleshooting the install

If the installation fails, check the installer log.

1. Click the Window menu and select the Installer Log option.
2. Select **Show All Logs** to use the full output, to help you identify the issue.
